ATRC

Linux for Non Technical Users.

All you wanted to know about Linux but were afraid to ask.

Designed For

Anyone who has to use a computer productively for common tasks including Email, Correspondence, and Web Browsing. Managers who need to understand what can be done, how to guide people to the appropriate software and how many resources a task should take.

Aims

It is often that common users of computers are affected by a computer virus. They usually do not know of the infection until their computers slow down to a pace which makes them useless or cause them to simply stop working. The infection usually causes a lot of their work to be lost. Then time and money is wasted cleaning up the virus mess from almost all of the computers in an organization. Linux offers a virus free and productive environment with better functionality, performance, security and reliability on the same existing hardware. This course shall equip the user to be able to harness the power of Linux for their daily tasks and thus avoid lost time and money due to viruses completely. This course shall also teach them to save data in a way that almost none of it shall be lost even if their hardware fails or is stolen. It also teaches you ways to secure your data in a way that no one except you can access it without your authorization. Not even the CIA, NSA, FBI or whoever, even if they have physical access of your computer.

Course Benefits
No more virus excuses.
No more worrying about lack of security.
No more lost data.
No more cleaning up of the computer.
No more blue screen of death (BSOD).
Real Protection of data from unauthorized people.

Trainer

Khawar Nehal
Mr. Khawar has been using and teaching Linux for almost a decade since 1994.
He started using computers 23 years ago in 1980. He has been in the field of computers actively for the past 19 years since 1984.
