Updated : 1 July 2023

## **There are no such things as knowing for sure.**

Some may argue that truth is subjective, and that different people may have different perspectives on what is true.

There is no way to prove the existence of a universal truth.

There is no such thing as truth because it is impossible to prove or disprove.

# Nuclear fusion

Metals absorb hydrogen over a few days.

This causes fusion of hydrogen into helium when electrolysis is done after a few days of absorption.

This is what Stanley and Pons discovered in the 1980s and were made fun of to death by the oil industry.

It works in Nickel and other lower cost metals also.

# There are no such things as black holes

These are just a theory based on what some people choose to understand.

Gravity is a push not a pull. That is why it seems there needs to be a black hole or ore at the center of Galaxies and the expectation of dark matter to fill up the missing mass needed to prop up the old newtons laws is in play.

# The cosmic microwave background

The CMB is due to microwaves rays scattering around the solar system. It is NOT the edge of the universe.

This is based on the anisotropy being aligned with the solar system.

## Sodium potassium pump

Sodium goes into the cell. The sodium gets converted into potassium into the cell via a nuclear reaction and potassium comes out.

Nuclear reactions can occur at low energies via reverse beta decay. The electron drops into the nucleus or gets sucked inside.

During the way, it may become a muon “which no one ordered”.

The electron can come close to the nucleus by becoming a muon and then falling in to cause reverse beta decay.

# Sodium potassium pump

The sodium to potassium is an endothermic reaction.

It is also used to cool the body from the inside.

If no sodium is available, then the body becomes extremely lethargic to avoid creation of too much heat inside the muscles.

In hot weather, sugar is to be avoided because it causes loss of minerals like magnesium and sodium.

ORS is required to get the minerals back inside so the cooling SPP functions can operate.

# Trees

Tree leaves are not at ambient temperature.

They are temperature controlled.

## CO2 fiasco

The CO2 fiasco is made to fool people from poor countries to stay poor.

Especially to avoid the lowest cost chemical energy. Coal.

Notice that Nuclear is never a topic in any energy conference.

Some countries want the poor countries to stay poor so they can rule over them like nawabs and not have to do efforts during their lifetimes.

Let the pheasants do the hard work. Keep them poor.

No coal or nuclear power for them.

## How calcium is made.

Magnesium gets converted into calcium inside the bodies of many living things.

Humans need magnesium for strong bones.

Humans need magnesium for blood pressure control. The veins act like muscles and magnesium is an important element which is related to this process.

Two proofs.

A Japanese high school hatched chickens in glasses without the shells.

An aquarium with shell fish shall grow calcium from magnesium with only input of mineral water. The air and water shall not provide any extra calcium as input. But other elements shall be provided. So the shell fish shall grow calcium over a period of a few weeks which shall display the creation of calcium from other elements.

## How sulfur is made.

Rotten eggs smell of sulfur which is created in the egg. There is not as much sulfur to start with in the beginning.

# Neutrinos cause radioactivity

Radioactivity is not regular.

Avogadro's number is large. 26 digits.

So if radioactive decay is supposed to have a half life of billions of years, then the time to detect emissions of radioactive particles should be very stable.

Not random like we can hear in a geiger muller counter.

# Electrons

Electrons are waves which go through all slits at the same time and interact with themselves.

Photons are standing waves which are harmonics.

Photons seem to move at different speeds in different materials because of the continuous interaction of them with the matter around them.

The speed of light is based on the speed at which the harmonic can change with the ether in which the photon wave is oscillating in.

An electron and positron comes into existence when a photon wave becomes two standing circular waves. ( Somehow ).

## If you know better.

You are welcome to share your opinion.

Stating your opinion as a fact shall be rejected.

Unless you can prove your point somehow.
