Dear Recruiting Manager,

Thank you for taking time to go through my application and this cover letter. My expertise is 30 years of secure and reliable Information and Communications Technology (ICT).

My job area preferences in order of priority are : Training and Education, Cyber Security. Industrial Automation, Integration of disparate systems, Cloud Computing, CIO/CTO, ICT (Computers and Networks) Director, Internet Service Providers, and Telecom. I also have some knowledge of energy related areas so if the work relates to dealing with engineers, then they shall find it comfortable to communicate with me.

I have a lot of experience in the field working for a very large variety of clients. This provides a lot of experience. The advantage of hiring me is that you can get consulting level experience supported by employee level responsibility for results.

The resume details a lot of the experiences and projects that have been accomplished. However, there are many other areas I am working on and gaining experience continually. We can discuss the experiences related to the specific jobs offered and I can then recall the projects and experience I have related to the specific tasks and responsibilities.

When you have an opening where you are authorized to place an employee from other countries and the skills match my experience I hope you shall consider me for the position.

Waiting to hear from you.

Regards,

Khawar Nehal
