

The Training Company

The Training Company

Since 1992 The Training Company has trained over 5000 students in subjects related to Computers, Energy, Management, and Technology.

We offer courses in Pakistan and UAE. We are planning on offering courses online to expand the reach of our trainings so they can be beneficial to more people via the available Internet technologies of the time.

We are also actively looking for partners like training institutes, educational institutions, and universities to develop and deliver courses which shall be beneficial today and in the future for the students and clients.

Good for your business

Training can improve business performance, profit and staff morale.

Advantages

to your business include:

- You choose what new skills your workforce gains, targeting skills to meet the
- needs of your operation for now and in the future
- Training your staff can result in better customer service, better work safety
- practices and productivity improvements
- You demonstrate to your workforce that you value them enough to invest in them, improving loyalty and staff retention. In turn, retention is a saving to you.

Good for your workers

Training has many benefits for your staff:

- They acquire new skills, increasing their contribution to the business and building their self esteem
- The training they do can take them into other positions within the organisation – positions with better prospects and/or better pay
- They are up skilled to do new and different tasks, which keeps them motivated and fresh.
- Because they're being trained on your time, they see that you value them enough to invest in them. A good company is seen as one that retrains rather than churns.

Information and Communications Technology (ICT) Courses
